

Introducing Pelican's First Self Driving Flashlight

It has a mind of its own. The Pelican 3345 is the first intrinsically safe flashlight that automatically adjusts brightness to the most effective level.

The Variable Light Sensor in the new Pelican™ 3345 flashlight examines the ambient light/proximity and instantly adjusts its lumens to the most effective level. Now you can read pressure gauges close up or throw light hundreds of feet away - without hassling over manual power settings.

**Class I, II, III
Division 1 Safety
Certified**
